ABSTRACT

Finding relevant academic literature remains a persistent challenge for students and researchers, who often struggle to navigate scattered, poorly organized sources of scholarly information. Research Connect addresses this problem by providing a web-based platform designed to streamline the discovery of academic papers. The system allows users to search for research through multiple parameters, including title, author, keywords, publication year, and research domain, enabling more precise and efficient retrieval of relevant materials.

By consolidating academic content into a single, centralized repository equipped with advanced search and filtering capabilities, Research Connect eliminates the need to search across disparate databases and platforms. This centralized approach not only reduces the time researchers spend locating pertinent studies but also enhances the overall accessibility and organization of academic knowledge. Ultimately, Research Connect supports more effective knowledge sharing and fosters collaboration within the academic community, serving as a valuable tool for advancing research productivity and scholarly communication.
